

Qualcomm Salivates Over 5G And Internet Of Things

Qualcomm understands that 5G will provide a gusher real-time data to be collected, manipulated and sold for huge profits. Technocrats lust for and hoard all the data that they can get their hands on. □ TN Editor

Like many municipalities, the city of Carlsbad has deployed connected water meters to reduce costs of sending crews out to read meters manually.

But these smart meters provide something perhaps more valuable than operational savings. They generate digital data on water use.

The Carlsbad Municipal Water District began running analytics software on that data to spot spikes and anomalies in consumption. For a time, a staffer would call residents to let them know their usage had surged.

The result was 16 million gallons of water saved in just six months, said David Graham, Carlsbad's chief innovation officer, at Qualcomm's Smart

Cities Accelerate 2019 conference this week.

“That doesn’t exactly drive revenue for the city. We get more revenue the more water people use,” said Graham. “But it drives a better customer experience, and ultimately in California we want to reduce water usage across the board.”

The benefits and challenges of smart cities technologies were the focus of Qualcomm’s Smart Cities event, where more than 550 people, including representatives from 400 companies that make smart cities technologies, attended at the company’s Sorrento Mesa campus.

For Qualcomm, smart cities technology is part of its strategy to bring the wireless connectivity not only to smartphones but also to many other things including roads, energy and water grids and smart streetlights.

Faster, more flexible 5G networks, which have begun rolling out globally, have been tailored to eventually connect as many as one million devices per square kilometer — paving the way for a vast expansion of connected sensors, cameras and infrastructure.

For cities, connecting and analyzing data from connected street lights, water meters, energy grids and environmental sensors has the potential to improve safety, ease traffic jams and preserve scarce resources.

“At an intersection, which is really one of the most dangerous parts of driving, you can actually manage it with a combination of cars communicating with cars, cars communicating with the infrastructure and the infrastructure, with video, having the ability to understand exactly what is going on,” said Jim Thompson, chief technology officer of Qualcomm.

Greta To UN: ‘How Dare You?... You Have Stolen My Dreams

Greta blistered the United Nations for stealing her childhood and dreams, claiming that we are on the verge of a mass extinction and climate apocalypse. She has no clue that the UN invented the climate hysteria scam in the first place. □ TN Editor

A visibly angry Greta Thunberg berated world leaders as she addressed a UN climate summit on Monday, accusing them of betraying her generation by failing to tackle greenhouse gas emissions and asking “How dare you?”

The Swedish teen, who has become the global face of the growing youth movement against climate inaction, began by telling her audience: “My message is that we’ll be watching you,” eliciting laughter.

But it was soon clear that the tone of the message would be very serious.

“This is all wrong. I shouldn’t be up here. I should be back at school on the other side of the ocean,” the 16-year-old, who is taking a year off from her studies, said.

“You come to us young people for hope. How dare you?” she thundered.

“You have stolen my dreams and my childhood with your empty words, yet I’m one of the lucky ones. People are suffering, people are dying, entire ecosystems are collapsing.

“We are in the beginning of a mass extinction, and all you can talk about is the money and fairy tales of eternal economic growth. How dare you!”

She added that in her talks with leaders, she had been told that the youth were being heard and the urgency was understood.

“But no matter how sad and angry I am, I do not want to believe that, because if you really understood the situation and still kept on failing to act, then you would be evil, and that I refuse to believe.”

Thunberg, who often appears uncomfortable in the limelight and is seen as a reluctant leader, then detailed the various targets that were being missed, heightening the risk of “irreversible chain reactions beyond human control.”

Pope Announces Global Compact On Education For ‘New Humanism’

Pope Francis called on global leaders to join in on May 14, 2020 to sign a new Global Compact on Education that will lead to a ‘New Humanism’. Channeling Hillary Clintons book, *It Take a Village*, he wants to ‘educate’ all young people into becoming global citizens. □ TN Editor

In a renewed and enthusiastic endorsement of globalism, Pope Francis has announced he is hosting an initiative for a “Global Pact” to create a “new humanism.”

The global event, set to take place at the Vatican on May 14, 2020, is themed *Reinventing the Global Educational Alliance*.

According to a Vatican statement issued on Thursday, Sept. 12, the Pope is inviting representatives of the main religions, international organizations and various humanitarian institutions, as well as key figures from the world of politics, economics and academia, and

prominent athletes, scientists and sociologists to sign a “Global Pact on Education” so as to “hand on to younger generations a united and fraternal common home.”

“A global educational pact is needed to educate us in universal solidarity and a new humanism,” Francis said in a video message to launch the initiative.

A Vatican-backed website launched to promote the pact added: “Educating young people in fraternity, in learning to overcome divisions and conflicts, promote hospitality, justice and peace: Pope Francis has invited everyone who cares about the education of the young generation to sign a Global Pact, to create a global change of mentality through education.”

The Pope’s message on the ‘Global Pact’

In a strikingly secular message containing only one throw-away reference to the Lord, Pope Francis called on people to “capitalize on our best energies” and to be “proactive” in “opening education to a long-term vision unfettered by the status quo.”

“This,” he said, “will result in men and women who are open, responsible, prepared to listen, dialogue and reflect with others, and capable of weaving relationships with families, between generations, and with civil society, and thus to create a new humanism.”

Quoting Hillary Clinton’s favorite aphorism, “[It takes a village to raise a child](#),” Pope Francis asserted the need to create an “educational village,” in which “all people, according to their respective roles, share the task of forming a network of open, human relationships.”

At a time when the right to homeschool and the right to a free choice of school are threatened, and when countries throughout the world level taxes to provide public schooling to which no Catholic parents could safely send their child, Pope Francis omitted any reference to the prerogatives of parents as the primary educators of their children.

Referencing the “Document on Human Fraternity and World Peace for

Living Together,” which he signed with the Grand Imam of Al-Azhar in Abu Dhabi last February, Francis explained that, in this new global village, “the ground must be cleared of discrimination and fraternity must be allowed to flourish.”

Readers will recall that the Abu Dhabi document aroused controversy for stating that the “diversity of religions” is “willed by God.”

“In this kind of village,” the Pope also said an “alliance” must be forged “between the earth’s inhabitants and our ‘common home,’ which we are bound to care for and respect. An alliance that generates peace, justice and hospitality among all peoples of the human family, as well as dialogue between religions.”

Not everyone is convinced that peace can be achieved by promoting the Abu Dhabi document, however. Bishop Athanasius Schneider recently [observed](#) that “however noble such aims as ‘human fraternity’ and ‘world peace’ may be, they cannot be promoted at the cost of relativizing the truth of uniqueness of Jesus Christ and His Church.”

In his message, the Pope said that in order to reach these “global objectives,” as an “educating village” we must “have the courage to place the human person at the center” and to “train individuals who are ready to offer themselves in service of the community.”

He ended his message by inviting “everyone to work for this alliance and to be committed, individually and within our communities, to nurturing the dream of a humanism rooted in solidarity and responsive both to humanity’s aspirations and to God’s plan.”

Healing the Planet

Pope Francis has tasked the Vatican’s Congregation for Catholic Education with organizing the initiative. According to a [website](#) dedicated to the global pact, the Congregation oversees “216 thousand Catholic schools, attended by over 60 million pupils and 1,750 Catholic universities, with over 11 million students.”

In explanatory note accompanying the Pope’s message, the

Congregation said that the May 14 global pact initiative seeks to involve “international organizations” and the “great ones of the earth” in helping to “heal the fracture between man and the Absolute” and the separation between “reality and the transcendent.”

It also aims to heal the “horizontal fracture” between men of difficult cultures, religions and backgrounds. And it intends to heal the “fracture between man, society, nature and the environment” in the face of an “urgent need” to create an “ecological citizenship” based on sustainability and an “austere responsibility.”

“The objectives set for the next few decades aim to set up training models that take into account a constantly increasing population, diminishing resources and the fact that climate change places everyone before a serious responsibility: that of developing our planet in a sustainable way, with an eye to the needs of future generations,” the Congregation said.

“The choice of education as a ground on which to make a global pact is a priority topic in the horizon of current and future scenarios,” it added.

Conferences and events will be held throughout the coming year to prepare for the May 14 signing of the “Global Pact” on education.

In May 2019, Pope Francis made a strong push for globalism, [calling](#) for a supranational, legally constituted body to enforce United Nations Sustainable Development Goals and to implement “climate change” policies.

More recently, during an inflight press conference on his return from a seven-day apostolic visit to Africa, Francis [said](#) our “duty” is to “obey international institutions,” such as the United Nations and the European Union.
