

Former UK PM Calls For ‘Global Government’ To Tackle Coronavirus

UK's Ex-Prime Minister Gordon Brown has been widely hailed as a Technocrat, social engineer and member of the global elite. He is calling for a ‘working executive’ who would have power to direct all nations in the fight against the coronavirus pandemic. □ TN Editor

Now is the time for global leaders to create one world government to tackle the twin medical and economic crises caused by the Chinese coronavirus pandemic, former UK Prime Minister Gordon Brown urged on Thursday.

The left-wing former Labour leader said there was a need for a taskforce involving world leaders, health experts and the heads of international organisations that would have supreme and unfettered executive powers to coordinate the response.

He gave no indication of who would appoint the “leaders,” how long they would serve for or just what their powers would involve, the *Guardian* [reports](#).

Brown simply wants a new layer of global supra-government to force a solution to a crisis that began in Wuhan, China.

“This is not something that can be dealt with in one country,” he said. “There has to be a coordinated global response.”

Brown said the current crisis was different to the one he was involved in 2008 during the global financial crash. “That was an economic problem that had economic causes and had an economic solution.

“This is first and foremost a medical emergency and there has to be joint action to deal with that. But the more you intervene to deal with the medical emergency, the more you put economies at risk.”

Brown said his proposed global taskforce would fight the crisis on two fronts. There would need to be a coordinated effort to find a vaccine, and to organise production, purchasing and prevent profiteering.

Is Killing The Economy Worth Killing The Virus?

Destroying the economy is the primary goal of Sustainable Development, aka Technocracy. However, far more people will suffer and die in a chaotic, collapsed economic system, than from the coronavirus itself for ironically, there will be no resources left to help save those lives. □ TN Editor

“We cannot let the cure be worse than the problem itself,” tweeted the president on Sunday night, adding that, after the current 15-day shutdown, “we will make a decision as to which way we want to go.”

President Trump is said to be privately expressing a deepening concern at the damage the coronavirus shutdown is doing to the U.S. economy and debating whether it can be safely reopened.

Though castigated for his remark, Trump has a point.

The U.S. is rightly using extreme measures to meet the threat and control the virus that threatens the lives of millions of Americans, with the elderly sick foremost among them. And we need to do so without killing the economy upon which scores of millions of other Americans depend.

Clearly, America was unprepared for this pandemic.

And there will be time enough to assess responsibility for the lack of surgical masks, medical gowns, rubber gloves, respirators, ventilators and hospital beds.

The immediate imperative is to produce those beds and that equipment and get it delivered to doctors, nurses and hospital staff, the front-line troops in the battle to control the virus.

However, during this shutdown, all “nonessential businesses” are being closed and their workers sent home to shelter in place and to keep “social distance” from friends and neighbors to minimize the risk of

spreading this easily transmissible virus.

Unfortunately, what is “nonessential” to some — bars, restaurants, hotels, stores, cruise ships, tourist sites, shops, malls — are places of employment and indispensable sources of income for millions of other Americans.

Close the businesses where these Americans work and you terminate the paychecks on which they depend to pay the rent and buy the food and medicines they and their families need to shelter and live. And if the salaries and wages on which workers depend are cut off, how are these millions of newly unemployed supposed to live?

How do those who follow the instructions of the president and governors to remain in their homes get their prescriptions filled and buy the food to feed their families?

How long can the shutdown be sustained if the necessities of life for the unemployed and unpaid begin to run out? Is it necessary to create an economic and social crisis to solve the medical crisis?

“We had to destroy the village in order to save it,” was a remark attributed to a U.S. Army officer in the Vietnam War. Must we cripple or destroy the economy to rescue the American nation from the coronavirus crisis of 2020?

Then there is the matter of time. Many Americans can survive on what they have on hand for two or four weeks. Far fewer can survive without income for two or four months.

If we shut down the economy, what will we have when the medical crisis passes, be that in May, June, July, August or September?

A Non-Technocrat Method To Fight Coronavirus

TN has stated repeatedly that not all scientists and engineers are Technocrats. Dr. Shiva Ayyadurai holds four degrees from MIT plus a PhD in Biological Engineering and yet seeks to use his knowledge to serve mankind rather than to control it. □ TN Editor

States and cities are shutting down businesses, closing schools, prohibiting crowds, imposing curfews—all to contain the spread of coronavirus.

The draconian measures are a major subversion of Americans' constitutional liberties, yet proponents of such policies claim they are a necessary evil to prevent this latest pandemic from causing mass fatalities. The disastrous effect on our economy, they say, is to be preferred to the deaths of millions.

But what if we didn't have to choose one or the other? What if protecting American lives and preserving our freedom and economic stability weren't mutually exclusive?

Sound too good to be true? Not according to Dr. Shiva Ayyadurai.

In a [letter](#) to President Trump, Dr. Ayyadurai, a world-renowned systems scientist and pioneer in the field of systems biology, outlined a solution to the current crisis that he said would restore the immune health of the American people without jeopardizing the nation's economic health.

Ayyadurai holds four degrees from MIT, to which he [returned](#) in 2003 to complete doctoral work within the Department of Biological Engineering—work that led him to develop CytoSolve, a “scalable computational platform for modeling the cell by dynamic integration of molecular pathways models.”

In his letter to the president, Dr. Ayyadurai rejects the response model pushed by Dr. Anthony Fauci, who serves as director of the National Institute of Allergy and Infectious Diseases and is seen as the guiding force behind the Trump administration's coronavirus policy.

“The current trajectory of Dr. Fauci's public ‘health’ policy will result in the short-and long-term destruction of citizens' immune health as well as our nation's economic health,” Dr. Ayyadurai asserts. “Dr. Fauci's policy, at best, is based on a 1950s outdated ‘one-size-fits-all,’ non-personalized approach to medicine and public health; and at worst, is derived from a ‘fake science’ understanding of the immune system”

Dr. Ayyadurai argues that “[t]here is no need to shut down our entire country. There is no need to quarantine all of our citizens. The solution herein provides a path to advance the immune health of all our citizens while getting our healthy people back to work — now.”

The MIT-grad lays the foundation for his proposal by explaining that, contrary to the common misconception, it is not the virus — coronavirus or otherwise — that harms individuals, but a person's own faulty immune system.

The modern science of the immune system informs us that it is the over reaction [sic] of our OWN weakened and dysfunctional immune system attacking tissues and cells of our own body that harms and kills, versus the virus — be it COVID-19 or any other virus.... In healthy individuals,

the immune system processes pathogens with a natural immune response that is mild and non-lethal; however, in those who are immune-compromised — elderly and those with pre-existing conditions—their own immune systems may overreact; and in the case of COVID-19, attacking lung epithelial cells and tissues leading to hospitalization and mortality.

It is [commonly acknowledged](#) that even though all Americans are being asked to self-quarantine and refrain from their regular business, coronavirus generally provokes serious symptoms in the elderly and those who have weakened immune systems due to conditions like heart disease, diabetes, or obesity.

Healthy adults are usually either asymptomatic or at most experience a brief fever and flu-like symptoms, while cases of affliction in children are rare.

Dr. Ayyadurai holds that because most Americans will not be severely impacted by the virus, it is not necessary to quarantine everyone. And because the risk is the result of a weakened immune system, the key is to strengthen people's immunity.

He then goes on to outline “the solution that can lead America back to health—immune and economic:”
