

LA Schools: Health Pass Now Required For Children To Enter School

Bill Gates' Microsoft has partnered with the Los Angeles Unified School District to implement "Daily Pass" for all students to gain access to campus, proving that they don't have COVID, despite the data showing that children have a minuscule chance of getting it. □ TN Editor

You expect to produce a ticket to get on a plane, train or enter the theater. But Bill Gates has designed it so children in Los Angeles need a ticket to go to school.¹

The app is called the Daily Pass and follows on the heels of the city's digital vaccine verification announced in January 2021. Digital health passports and vaccine verifications are the beginning of data collection and social engineering that are being designed to change your behavior and control your movements.

These digital passports are being fed to a public that is weary of lockdowns and mask-wearing and longs for the ability to get back to some semblance of normalcy. It is being dangled as a mechanism for freedom. Adults will be required to show proof of a vaccine or a recent

negative COVID-19 test before being able to travel, attend a concert or enjoy a meal in their favorite restaurant.

The problem is that to live life freely, you must have “papers.” Instead of freedom, it’s discrimination and a movement toward technocratic fascism, setting the stage for increased surveillance and erosion of your privacy. Despite this blatant move toward a surveillance state, many are welcoming digital passports because they’ve been led to believe it’s necessary to protect public health and safety.

The new Daily Pass app rolled out in Los Angeles is the next step in adjusting the behaviors and movements of children with full knowledge that when children are acclimated to the requirements of the Great Reset, it’s more likely they will continue to “follow the leader” as adults.

Health Pass Required for Children to Enter School

Los Angeles Unified School District (LAUSD) announced the launch of “a one-stop-shop web app built specifically for the District” on their website.² LAUSD superintendent Austin Beutner called it the “golden ticket in Willy Wonka,” which allows anyone with the pass easy access into the school building.³

The app was developed with Microsoft to generate a unique daily QR code that is scanned by the system at school.⁴ Without that code, students will not be allowed to enter the school building. The code is generated after the student gets a negative test result for COVID-19, reports a temperature under 100 degrees and answers daily health questions on the app, a procedure which the school says will not take more than two minutes.⁵

To generate the daily pass, the student must test negative using a PCR test.⁶ The LAUSD tells their parents, employees and students: “While we recommend the use of nasal swabs, anyone can request a saliva test if they prefer. Both tests are what’s known as PCR tests, the gold standard

for COVID-19 testing.”⁷

This leads parents, students and employees, who may not stay abreast of research studies, to believe that PCR testing is the most accurate method of identifying a COVID-19 infection. However, as I’ve talked about, PCR testing may be highly inaccurate and the results have been manipulated based on the cycle threshold used.

In addition to these requirements, students must confirm they have not been in close physical contact with anyone with symptoms, have not traveled outside of Southern California for the past 10 days and agree that they have been “as safe as possible.” In addition, the app user is then informed:⁸

“If you ‘disagree’ with any of the above, you will not be allowed to enter a school or District office and you can schedule a COVID-19 test if you are an employee or student at ...”

Within the app, students are asked, “Do you agree to commit to the safest behaviors possible and in so doing, keeping the schools safer?” and within the portal users are told:⁹

“Anonymous data from Daily Pass will be used by the Los Angeles Unified’s research and health care collaborators — Stanford University, UCLA, The Johns Hopkins University, Anthem Blue Cross, Healthnet, and Cedars Sinai — to provide insights for strategies to create the safest possible school environment.”

These statements, separating the word “disagree” in quotes and content from the explainer video discussed below, are subtle and subconscious ways of pressuring students and staffers to accept behavioral changes and vaccinations in the march toward greater surveillance and control.

Additionally, the user is told their information will be shared “anonymously.” However, it is difficult to imagine that this information will remain anonymous when highly secured banks,¹⁰ retailers¹¹ and even the federal government¹² have been hacked and information stolen.

On the Road to a Health Passport

What began in Los Angeles as digital vaccine verification in January 2021, has quickly morphed into a comprehensive check-in system children must pass in order to enter their school buildings. NBC Los Angeles reports on the other functions daily pass will have, including:¹³

“... register and schedule appointments, track vaccines in stock, perform check-in and data capture at time of appointment, sort high-risk individuals, offer waitlists to low-risk individuals and dashboards to view data, among other features, the district said.”

To introduce the app to students and parents, the district produced an explainer video, positioning it as a solution for children who are fearful of becoming sick. One Twitter post captioned the video, “California is a dystopian nightmare.”¹⁴

The explainer video introduces Daily Pass as a solution. After following the student through her first day at school where she dutifully follows the safety rules, including staying 6 feet apart from other students, the cartoon character announces to her father that she is no longer scared and grateful that her father kept her safe.

The Daily Pass is an iteration of vaccine passports, both of which may quickly morph into health passports during 2021 and 2022 if they are widely accepted. Although vaccination is currently presented as a voluntary medical procedure, without a vaccine you may ultimately experience severe limitations to travel, indoor events and socialization.

However, giving special privileges to those who are vaccinated essentially amounts to mandatory vaccination and acceptance of surveillance and tracking. The presentation as a measure to protect public health is in reality threatening your freedom to go about normal daily life unless you consent to the COVID-19 vaccine.

In addition to the Microsoft Daily Pass, the CommonPass app is intended to act as a health passport where users upload medical data that go far beyond vaccination. It is anticipated the CommonPass will integrate with

personal health apps currently in place, such as Apple Health and CommonHealth. If your personal health record doesn't meet entry requirements, you could be denied.
