

HOW ABORTED BABY PARTS USED TO "HUMANISE" MICE

Sick: Aborted Baby Parts Fused Into Mice For 'Frankenstein' Experiments

Technocracy views human life on the same level as animals, so Technocrat scientists see no ethical dilemma in using aborted baby parts in medical experiments with animals. Planned Parenthood remains in the middle of this controversy. □ TN Editor

Aborted babies are being used in macabre experiments in the US that involve grafting dead fetus parts onto mice which are then used to test drugs.

Documents seen by Sun Online outline procedures that involve cutting out glands and livers of unborn children and then fusing them onto lab rodents.

The use of aborted baby body parts and stems cells has sparked anger among anti-abortion groups in the United States and it has been dubbed "Frankenstein" science.

And shocking undercover footage has led to the Donald Trump administration to reassess if the practice should be continued at all.

Clinics are supposed to ask if they would like to donate tissue but it is unclear whether the parents are aware their dead children's bodies are being used in this way.

But what is known is that abortion clinics are supplying the fetal body parts, although they are not allowed to sell them.

Phelim McAleer, who has produced the film Gosnell, about a rogue abortionist, told [Fox News](#): "Aborted babies bodies are a very valuable commodity in today's America.

"Research institutions, elite universities, medical centers pay a lot of money for baby parts."

Undercover footage in an abortion clinic run by Planned Parenthood shows dismembered aborted babies, with arms, legs and other parts.

They were being shown to pro-life activists from the Centre for Medical Progress who were posing as buyers.

The Sun Online has chosen not to show the graphic footage because it is too distressing.

Planned Parenthood has denied profiteering from the sale of body parts but it did say mums can give permission to donate their unborn fetus, which it said was common practice in such clinics.

Spokesperson Eric Ferrero said in a statement: "At several of our health centers, we help patients who want to donate tissue for scientific research, and we do this just like every other high-quality health care provider does."

US Government Backed Research

The controversial use of body parts is being spearheaded by the National Institutes of Health (NIH), which is part of the American government which is ploughing \$98million (£75m) of taxpayers' money into using

aborted babies in the name of science.
